

#### MEANING OF **COLLABORATION**

Networking at national and international level is of great value to advance new methods and technologies. In Europe, researchers are actively involved in the establishment of European Reference Networks (ERN) for rare diseases. Additionally, the intensive collaboration between patients, patient organisations and physicians is very important. This is the basis for carrying out clinical studies and establishing patient registries and biobanks.

needed.

worsen irreversibly. In order to avoid those

developments, patient pathways have to

be defined and specialist knowledge is
